

TUBE SQUARING and BEVELING MACHINES SE 60 / SE 90 / SE 120

- The SE SERIES end prep tools are lightweight and portable.
- They will perform repeatable quality weld preps on most metal pipes and tubes including stainless steel from 5 to 120 mm O.D.
- The cutting head will bevel, face and counter bore individually or in synchronized operation. The tool holder can hold up to 4 tool blocks. The tool holder is easily removable and thus allows the operator to save time once the tool blocks have been adjusted by exchanging the whole tool.
- The SE SERIES machines are available with either pneumatic or electric drive. The SE machine holds the tube by the mean of heavy duty collets made in 3 parts at OD tube dimension.

SE 60 presented on a bench with automatic clamping device

SE Series portable machines designed for heavy duty jobs

TECHNICAL SPECIFICATIONS

Clamping and machining capacity	SE 60 : 10 mm to 60 mm O.D. SE 90 : 25 mm to 90 mm O.D. SE 120 : 60 mm to 120 mm O.D.
Tool bit rotation	Off load speed : 0 to 221 rpm
Weight	SE 60 : 7.5 Kg SE 90 : 8.5 kg SE 120 : 9.5 kg
Feed	Manual feed - 25 mm travel
Drive	1HP or 2HP Pneumatic motor
Option	1200 W Electric drive Additional tool blocks Bench mounting provision Automatic clamping
